

# Ekta Mulchandani

I build AI agents, train people to adopt them,  
and measure whether the change sticks.

I run implementation, training, and adoption for 38+ enterprise accounts at Retensa, a B2B SaaS platform for employee engagement and retention. I pair a master's in industrial and organizational psychology with hands-on agent building in Claude and NotebookLM, so the tools I launch get used and keep getting used.

**38+**

enterprise accounts managed across  
TalentPulse and ExitPro

**13**

KPIs tracked for training effectiveness and time  
to proficiency

**90%**

client retention rate across my portfolio

**6 mo**

from Associate to Client Success Manager

## INSIDE

- 01** AI agent suite: five agents and the loop they run
- 02** Prompt proof: how I refine an agent prompt
- 03** Enablement programs: formats, launches, and measurement
- 04** Builder and learning background

# Five agents that run the routine work of customer success

I designed, prompted, and maintain these agents in Claude and NotebookLM. They flag at-risk accounts, recommend fixes, build training, and draft client answers. I review and approve every output before it reaches a client, which frees my time for client conversations.

# How I refine an agent prompt: Training Generator

Every client gets different trainings, so the prompt has to carry the audience, the source of truth, and the learning goal. Here is the first draft next to the version I run today.

## VERSION 1 • FIRST DRAFT

Create a training script for our survey feature for HR users.

Result: generic scripts, no check for understanding, and steps the product does not have.

## CURRENT VERSION • EXCERPT

|           |                                                                                                                                                                    |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ROLE      | You are an enablement designer for TalentPulse, an employee engagement and retention platform.                                                                     |
| AUDIENCE  | {audience}. Default: HR generalists new to the platform with no technical background.                                                                              |
| SOURCE    | Use only the attached feature documentation. If a step is missing, write [CHECK WITH PRODUCT] and never guess.                                                     |
| GOAL      | After this session, the learner can complete {task} on their own.                                                                                                  |
| STRUCTURE | 1. Why it matters, in two sentences. 2. Walkthrough in five steps or fewer. 3. One practice task. 4. Two check-for-understanding questions. 5. A one-line job aid. |
| STYLE     | Plain English, active voice, second person, under 600 words.                                                                                                       |

## WHAT CHANGED AND WHY

### Grounded in the source

A strict source rule and a visible flag stop invented steps before they reach a client.

### One fixed structure

Every script follows the same five parts, so trainings stay consistent across 38+ accounts.

### A goal a learner can prove

A task-based goal ties each script to time to proficiency, one of my 13 KPIs.

### Audience as a variable

Swapping one field adjusts depth for admins, managers, or first-time users.

# Training that changes what people do

I apply evidence-based instructional design and the psychology of behaviour change, turning complex platform features into clear steps that HR, L&D, and operations teams adopt and keep using.

FORMATS I DESIGN AND DELIVER

- Live cohort sessions
- Virtual trainings
- Video platform demos
- Micro-learning
- SOPs
- Facilitator guides
- On-demand LMS resources
- Multi-track curriculum

|                        |                                                                                                                                                                                                              |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wellness survey launch | Ran the full lifecycle of a new Employee Wellness Survey built with a national mental health nonprofit partner: feature tours, UAT testing, bug documentation, client onboarding, and client communications. |
| Feature adoption plan  | Built a two-quarter client communication calendar and ranked 15 feature tours in three priority tiers. Planned customer advisory board sessions to test a new AI feature with top-tier clients.              |
| Webcast for HR leaders | Built a 13-slide webcast deck, <i>The Silent Crisis: Employee Disengagement and How to Stop Turnover Before It Starts</i> , in the Retensa brand system.                                                     |

HOW I MEASURE IT

13 KPIs

Training effectiveness, time to proficiency, and quality impact

Learner feedback

Post-session surveys, live Q&A, and stakeholder conversations

Curriculum audits

Regular updates as product, policy, and process change

# I build the tools I wish existed

## BUILT WITH CLAUDE CODE

### Reroot

A free, open-source web tool that guides international graduate students from program application to employment, with guided flows, email templates, copy-ready AI prompts, and a coffee chat booking link.

[reroot.it.com](https://reroot.it.com)

## BUILT WITH CLAUDE

### Networkcraft

A personal networking agent with seven modes and live web search. I also built my personal website with Claude Code.

## EARLIER LEARNING ROLES

### Backroads

LMS Intern • 2024

Administered Workday LMS, launched 50+ courses, built job aids, and trained managers on learning workflows.

### University of New Haven

Career Advisor GA • 2024 to 2025

Facilitated 50+ workshops and 150+ one-on-one coaching sessions, iterating on content from participant feedback.

### 24 High

HR Intern • 2023

Ran training-needs surveys, supported an LMS rollout, and built the cost-benefit case for stakeholders.

## EDUCATION

### MS, Industrial and Organizational Psychology

University of New Haven • GPA 3.96 • Commencement Speaker, Class of 2025

### BA, Psychology

University of Mumbai • GPA 4.0

## RESEARCH AND TOOLS

Two peer-reviewed papers published in Indian psychology journals, with two more in progress.

Claude, Claude Code, NotebookLM, Workday LMS, Jira, Nutshell CRM

Let's talk.
